alt-n QBIK GFI RED LINE

Alt-N Technologies, develops affordable and secure **messaging and collaboration** solutions designed for, and trusted by, small-to-medium businesses in over 90 countries and 25 languages worldwide.

The company's flagship solutions, the MDaemon®Messaging Server and the Security Gateway for Exchange/SMTP Servers, include the latest email security technologies, and require minimal support and administration to operate and maintain.

MDaemon Messaging Server

MDaemon® Messaging Server, mail server software, supports **IMAP**, **SMTP**, and **POP3** protocols and delivers solid performance from its feature-rich and user-friendly design.

A trusted alternative to Microsoft Exchange, the MDaemon Messaging Server provides outstanding groupware features, integration with Microsoft Outlook (using Outlook Connector for MDaemon) and a multi-language webmail client for email access anywhere.

The mail server software provides secure, standards-compliant and **low total cost of ownership (TCO)** features for small-to-medium-sized businesses in multiple languages, while supporting **mailing lists, content filtering, multiple domain support, flexible administration, and an open standards design for mobile access.**

MDaemon Messaging Server supports most mobile devices with access to **email, calendar** and **contacts**. For organizations that want simplicity, affordability, and compatibility between an on-premise email server and their BlackBerry smart phones, MDaemon includes **support for BlackBerry® push email** with a seamless management experience. MDaemon users can follow the simple and intuitive user interface to quickly set-up and receive push email delivery from the mail server to their favorite BlackBerry smart phone.

ActiveSync for MDaemon

MDaemon Messaging Server includes support for the latest version of Microsoft Exchange ActiveSync (EAS) which is a separately licensed ActiveSync (AirSync) server. ActiveSync provides native synchronization of a user's default email, calendar, contacts, and tasks data between the MDaemon server, World Client (MDaemon's web-based email client) or Outlook (using the Outlook Connector plug-in) account and ActiveSync capable devices like iPhone/iPad, Blackberry 10, Android Smart Phones, Windows Mobiles, etc. Other features include: Customizable Device IT Policies, Remote Wipe, Auto discovery, Multiple Folder Synchronization, Global Address Lookup, SSL Encrypted Transmissions, Device Whitelists and Blacklists, Forgetting Inactive Devices, and Device Protocol Restrictions.

SecurityPlus for MDaemon

SecurityPlus for MDaemon provides the next generation of antivirus and spam protection for the **MDaemon Messaging Server**. Providing real-time spam, Recurrent Pattern Detection Technology (RPD™), Zero Hour™ Virus Outbreak Protection, and inline email antivirus protection, it is the number one solution for safeguarding your MDaemon email server.

SecurityPlus for MDaemon provides the next generation of antivirus and spam protection for the MDaemon Messaging Server. Providing real-time spam, Recurrent Pattern Detection Technology (RPD™), Zero Hour™ Virus Outbreak Protection, and inline email antivirus protection, it is the number one solution for safeguarding your MDaemon email server.

Securityplus Helps to combat today's ever-changing security threats and provide your organization with the strongest defense against spam, phishing, and viruses and start protecting your organization's email infrastructure.

Outlook Connector for MDaemon

Outlook Connector for MDaemon® **Messaging Server** opens up the **groupware collaboration** functions of Microsoft Outlook to small and mid-sized businesses by using MDaemon as the email messaging server. With Outlook Connector for MDaemon you can stay in touch with employees, co-workers, customers and vendors by sharing Outlook's email, calendar with free/busy scheduling, address book, distribution lists, tasks, notes and more.

As with MDaemon, Outlook Connector is designed for businesses with little or no professional computer support. Its simplicity, economy and extensive features make Outlook Connector for MDaemon the recognized way to use Outlook's groupware collaboration tools on a small to mid-sized business budget.

RelayFax Network Fax Manager

RelayFax **network fax server management** software automates **sending, receiving, and managing your network faxes from your desktop,** while integrating full faxing functionality with your existing email system.

RelayFax Network Fax Manager connects to any number of POP mailboxes at scheduled intervals and collects waiting fax messages, which the software then **emails, faxes** or **prints** as defined in its configurable fax rules. POP3 and SMTP communications.

With RelayFax Network Fax Manager, you can send outgoing faxes and receive incoming faxes without leaving your workstation. Incoming faxes can be converted to various image formats such as TIFF, JPEG, and BMP. An available Optical Character Recognition (OCR) plug-in for RelayFax can be used to convert faxed images into editable document formats (DOC, PDF, etc.). A single fax can also be sent to multiple destinations.

Mailstore Software - Email Archiving for Businesses: MailStore Server allows you to archive your email, regardless of which email system you use to store them. This guarantees your company optimum flexibility now and in the future. Supported Email Systems:

- Microsoft Exchange Server 2003, 2007, 2010 and 2013 (mailboxes, public folders, shared mailboxes and journaling)
- Microsoft Hosted Exchange
- Microsoft Office 365
- IMAP or POP3-compatible email servers
- MDaemon messaging server
- IceWarp email server
- Kerio Connect
- Email clients such as Microsoft Outlook
- PST and other email files

ARCHIVE SERVER FOR MDAEMON

Archive Server for MDaemon save your emails and retrieve them in a snap. With Archive Server for MDaemon, you know exactly where all of your emails are. You can retrieve them quickly and you will not lose messages among the thousands. You can locate essential emails by combining several parameters: sequence of words, time range, recipients, subject matter, and senders. With a couple of clicks you create a **cross-referenced index** of all your correspondence, pinpointing the information you need. Then, you can put that information in your own inbox for immediate access. Or you can forward it – to clients, consultants, colleagues, and superiors.

GFI MailEssentials

GFI MailEssentials is now available in three editions :

UnifiedProtection Edition : Combines anti-spam email security functionally into one offering for comprehensive email protection.

Anti-spam Edition: An anti-spam solution for Exchange/SMTP/Lotus which features a spam capture rate of over 99%, with technoology to dramatically reduce false positives.

EmailSecurity Ediction : Server-based email security with up to five antivires engines, Trojan and executable scanning, email exploit detection and HTML sanitization for unique protection.

Support for most industry-leading messaging platforms including

* Microsoft Exchange2003, 2007, 2010 and Lotus Domino

* Multilayered anti-spam filtering : Third-party DNS blocklists (DNSBL) checking, SpamRazer anti-spam engine, Bayesian filtering, Greylistng anti-spam technique to identity spam emails originating from non-RFC compliant mail servers, etc.,

* Automatic whitelist management reduces false positives

* Protect your users against the menace of phishing emails

* Email disclaimers & email monitoring

* Email reporting & List server etc.,

Also available **GFI MailEssentials Online**

GFI EndPointSecurity

Control of USB sticks, iPods and other endpoint devices.

Protect your network from portable devices such as USB drives, iPods & PDAs.

GFI EndPointSecurity Prevents data theft and virus infection and Controls portable device access to your network from within the endpoint security software. This software enables administrators to actively manage user access and log the activity.

Prevents introduction of malicious and other unauthorized software to the network.

Gives administrators greater control - you can block devices by class, file extensions, physical port or device ID from a single location.

Allows administrators to grant temporary device or port access for a stipulated time frame.

Centrally monitors the network, detects connected devices & performs various tasks.

Automatically protects newly detected computers by deploying an agent & a default blocking policy.

GFI WebMonitor

Web security ,Monitoring and internet access control
Internet monitoring, web security and internet access control software

GFI WebMonitor™ helps you **boost employee productivity** by giving you the ability to monitor and control Internet access in real time, ensuring that employee web browsing activity is aligned with business needs, and that any files downloaded are free of viruses and other malware.

Formulate and enforce an effective Internet Usage Policy.

Maximize available bandwidth by controlling what type of sites can be visited, setting time and bandwidth thresholds, and through proxy caching.

Protect the network from dangerous downloads in real time by managing what type of files users can download and benefitting from multiple antivirus engines to scan for viruses and other malware.

Block socially-engineered phishing scam websites and prevent data Leakage through such sites.

Scan HTTPS-encrypted traffic for additional security.

Remote filtering - Company laptops should be used appropriately. GFI WebMonitor allows filtering policies to be applied even beyond the corporate network.

VIPRE Antivirus engine - Download scanning is now powered by VIPRE in addition to BItDefender. For extra protection you can still add the optional Kaspersky engine.

GFI Cloud   GFI

GFI Cloud gives IT admins control of their company's IT in minutes with patch management, web protection, antivirus, workstation and server monitoring, asset tracking, and remote control in one simple, web-based platform.

Patch management - keeping software up-to-date, secure and running at peak performance

NEW Web protection - gain control of user browsing, and protect your business from legal liability

Antivirus - securing servers, PCs and laptops on the move against viruses and other malware

Workstation and server monitoring - catching problems early, before they impact operations

FREE inventory and asset tracking - so you always know what is on your network

Integrated remote support - to quickly fix issues remotely, with TeamViewer®

GFI MailArchiver™

Exchange server email archiving, management and compliance

Email archiving software for small & medium-size businesses

GFI MailArchiver is an email archiving software that solves your email management problems on Exchange Server. With thousands of customers, it is a leading email archiving solution for small to medium-sized businesses (SMBs).

GFI MailArchiver is used by administrators all over the world to maintain an archive of all corporate email correspondence, significantly reduce the demands on the Exchange server, manage and reduce the company's dependehcy on PST files and also to meet a growing number of regulations on compliance.

All emails are stored in a central location, easily accessible in two ways, through a folder in your user's Outlook email client (including Outlook 2010) or by using a web browser.

GFI FaxMaker™

Network fax server software for exchange / SMTP/ Lotus

Simple, secure, automated electronic faxing

GFI FaxMaker is a well-established network fax server software solution. It makes sending and receiving faxes an efficient, simple and cost effective process and solves the problems with manual faxing: printing out the document, walking to the fax machine, waiting for the fax to go through, not to mention the cost of fax machine supplies and repair. GFI FaxMaker allows users to send and receive faxes directly from their email client.

VIPRE™
AntivirusBusiness

Low-resource enterprise antivirus and endpoint protection.

High performance, Business Antivirus and Endpoint Security

The VIPRE Antivirus Business product line gives you seamless, tightly-integrated security solutions that deliver antivirus and antispyware protection, client firewall, and malicious website filtering technologies that protect against the ever-changing and sophisticated wave of malware in a comprehensive, highly efficient manner.

GFI LanGuard™

Network security scanner and patch management

Network security and vulnerability scanner

GFI LanGuard™ is an award-winning network security and vulnerability scanner used by thousands of customers. GFI LanGuard provides a complete network security overview with minimal administrative effort, while also providing remedial action through its patch management features.

GFI LanGuard acts as a virtual consultant to give you a complete picture of your network set-up, provide risk analysis and help you to maintain a secure and compliant network state faster and more effectively.

GFI LanGuard assists you in these key areas:

Patch management

Vulnerability assessment

Network and software auditing

Assets inventory

Change management

Risk analysis and compliance.

Vulnerability assessment for smartphones and tablets FCC CIPA compliance reports

Patch management extended with 20+ new third party applications:

GFI EventsManager™

Event log monitoring, management and archiving

Event log monitoring, management and archiving made easy

GFI EventsManager assists with monitoring and managing event logs, maintaining network health and security while also helping you to comply with various regulations and acts including SOX, PCI DSS, Code of Connection, HIPAA, data protection laws and others.

This award-winning solution automatically processes and archives event logs, collecting the information you need to know about the most important events occurring in your network.

It supports a wide range of event types such as W3C, Windows events, Syslog, SQL Server and Oracle audit logs and SNMP traps generated by devices such as firewall, routers and sensors as well as by custom devices.

GFI MAXRemoteManagement™

GFI MAX RemoteManagement is the easy and affordable remote monitoring and management (RIM) solution used by thousands of IT Support Companies, VARs and Managed Service Providers. With set-up in just 10 minutes, it is easy to manage and monitor servers and workstations, deliver remote support, asset/inventory tracking and reporting, patch management and client reporting.

GFI MAXMailProtection™

GFI MAX MailProtection is our comprehensive hosted anti-spam, antivirus, and email business continuity service which is compatible with any email system and can be implemented rapidly. It ensures the optimal filtering of unwanted or harmful messages - while also providing customers with assurance that they can continue to access and respond to email even when their own email infrastructure is offline. The solution is easily customizable, simple to deploy, and extremely easy to maintain.

GFI MAXMailArchive™

GFI MAX MailArchive is the easy and affordable hosted email archive solution developed specifically for IT Support Companies & MSPs. Easy to get going and simple to administer it helps you build recurring revenue and offer affordable high value services to your customers. MailArchive can be used stand alone, or as a fully integrated service with MailProtection, so you have archiving, antivirus, anti-spam and always on email continuity, administered from one easy to use dashboard.

GFI MAXMailEdge™

GFI's Hybrid Approach allows you to leverage the advantages of both cloud-based and on-premise solutions with ease - making the most o your existing investment and maximising the strengths of each method.

GFI MAX MailEdge is designed specifically to be used only i combination with an existing on-premise software or hardware ant spam/antivirus solution. This hybrid delivery model allows customers t maintain their existing set-up yet also maximize the benefits of having inbound email first filtered in the cloud. Through its IP reputation filter connection throttling, directory harvesting protection, and option grey listing, GFI MAX MailEdge is able to safely block up to 90% of spam emails and email threats before they reach the custome network.

Secunia
Stay Secure

Secunia CSI 7
Corporate Software Inspector

Take control of the vulnerability threat
and optimize your IT security investments.
The Secunia CSI gives you the when,
the where, the what and the how.

Corporate Software Inspector – CSI –

The Secunia CSI 7.0 combines scanning and patching, thereby meeting the requirements of both IT security and IT operations. This combination of vulnerability intelligence, vulnerability scanning, patch creation and patch deployment integration is unique in the industry.

Secunia VIM 4.0

Verified Vulnerability
Intelligence brought to you on
time, every time, by Secunia's
renowned research team.

Vulnerability Intelligence Manager – VIM

The Secunia VIM offers the largest vulnerability management coverage in the industry, with more than 50,000 systems and applications comprehensively monitored for new and existing threats.

WinGate

WinGate Proxy Server is a sophisticated integrated Internet gateway and communications server designed to meet the control, security and communications needs of today's businesses. In addition to a comprehensive range of features, WinGate Proxy Server's license options provide you the flexibility to match your needs to your budget, whether you need to manage an enterprise, small business, or home network

WinGate Proxy Server allows you to:

Provide secure and managed Internet access for your entire Network via a single or multiple shared internet connections
