

Comprehensive, cloud-based email security

Overview

Email continues to be a critical communication tool. More than 108 billion business emails are sent and received each day, with that number expected to surpass 139 billion by 2018.*

With the importance and growth of email, email-borne threats likewise continue to grow in both quantity and sophistication. At the same time, the cost to businesses of email downtime is significant. Often without realizing it, companies amass up to three-quarters of their intellectual property within their historical email. Given these factors, it is critical that IT administrators safeguard their end users with a solution for three essential functions to complement their email hosting platform, namely: multi-layered security; continuity; and archive.

ControlEmail was designed from the ground up specifically for small and medium-sized business

All-in-one email security

ControlEmail provides an integrated and comprehensive solution for email security, encompassing:

- **ROBUST DEFENSE AGAINST SPAM AND VIRUSES** Multiple spam and virus engines within ControlEmail – including zero-hour antivirus protection – protect end users email against email-borne threats.
- **BUILT-IN CONTINUITY** ControlEmail is unique in providing built-in continuity, along with its core inbound/outbound filtering service, at no additional charge. If your email infrastructure is offline, the built-in continuity feature automatically allows end users to continue receiving and sending messages.
- **ARCHIVING** The integrated, ControlArchive service is a maintenance-free archive solution that can be implemented in minutes and that can help customers comply with government or industry regulations, prepare for e-discovery, improve productivity, and protect intellectual property.

The service is fully rebrandable at every customer touch point. The service's recurring revenue model, proven high retention rates, and generous margins provide partners with an ongoing and profitable revenue stream.
